1. Introduction

Dear Animesh,

Thank you for the opportunity to present this proposal. Digi Hook builds fast, secure and conversion-ready ecommerce websites. For your brand, we propose a complete online store with product browsing, cart, checkout and a self-managed admin panel — engineered for speed and built to scale as your catalog and orders grow.

This document outlines the proposed scope, our technology approach, two pricing plans, delivery timelines and commercial terms. The exact page structure and features will be finalised in a detailed discussion before work begins.

2. Website Scope — Proposed Pages & Features

PAGE / FEATURE	PURPOSE
Home	Brand introduction, featured products, categories and offers.
Shop / Product Listing	Browsable catalog with filters, sorting and search.
Product Detail	Images, variants (size/colour), price, stock status and add-to-cart.
Cart	Review selected items, adjust quantities, apply coupons.
Checkout & Payment	Address, shipping and secure online payment.
My Account / Orders	Customer login, order history and tracking.
About & Contact	Brand story and customer support / enquiry channels.

3. Technology — MERN Stack with Next.js

We build on the **MERN stack** (MongoDB, Express, React, Node.js) — with one deliberate upgrade: in place of plain React, we use **Next.js**, the industry-standard React framework used by leading global companies.

- **Speed** — product pages load near-instantly, reducing cart abandonment.
- **SEO** — search engines receive fully rendered product pages, driving organic traffic.
- **Scalability** — the same foundation supports a growing catalog, orders and traffic spikes.
- **Reliability** — MongoDB and Node.js power a stable backend for products, orders and payments.

The detailed engineering features included in each plan are listed in the Technical Annexure (Section 7).

4. Plans & Pricing

PLAN 1

₹40,000

Ecommerce Website + Admin Panel

A complete online store on Next.js — product catalog, cart, checkout and a secure admin panel to manage it all.

- All pages & features listed in Section 2
- Admin panel — add/edit products, variants, pricing and stock
- Order management dashboard and status updates
- Secure checkout with online payment integration
- Full performance engineering — see Annexure Table A
- Full security & reliability layer — see Annexure Table C
- Essential on-page SEO hygiene (clean URLs, meta titles & descriptions)

DELIVERY: 3–4 WEEKS

PLAN 2 · RECOMMENDED

₹55,000

Ecommerce Website + Admin Panel + SEO Dashboard

Everything in Plan 1, plus the complete SEO suite — built to bring shoppers to your store through Google.

- Full technical SEO implementation — see Annexure Table B
- Product & FAQ structured data (Schema) for rich search results
- Open Graph & social sharing optimisation for every product
- SEO Management Dashboard — edit titles, descriptions, URLs and previews per product/category, no coding — see Annexure Table D

DELIVERY: 4–5 WEEKS

All prices in INR. Domain, hosting, payment gateway and any paid third-party services are billed at actuals.

5. Our Process

1. **Discovery & scope discussion** — we finalise catalog structure, features and payment methods with you in detail.
2. **Design** — page layouts shared for your review and approval.
3. **Development** — the store (and SEO dashboard, per plan) is built on Next.js.

4. **Content & review** — products are loaded; you review the complete store on a staging link.
5. **Launch** — deployment to your domain with SSL, and a handover walkthrough.

6. Payment Terms — Milestone Based

MILESTONE	DUE	AMOUNT
Project kick-off	On acceptance of this proposal	20%
Design & development complete	On staging review of the full store	40%
Launch & handover	On go-live at your domain	40%

7. Support & Maintenance

Every plan includes **180 days of free post-launch support** covering bug fixes and minor corrections. Beyond that, we offer an optional annual maintenance plan — updates, backups, monitoring and priority support — quoted separately based on the plan you choose.

8. Technical Annexure

Everything below is explained in plain language — what each feature is, and why it matters to your business.

Table A — Speed & Performance (included in all plans)

FEATURE	WHAT IT IS	WHY IT MATTERS
Next.js Framework	A modern technology that builds websites for speed and reliability.	Faster website and better SEO.
Server Side Rendering (SSR)	The server prepares the page before sending it to visitors.	Faster first load and easier for Google to understand.
Incremental Static Regeneration (ISR)	Pages are pre-built and only updated when content changes.	Lightning-fast loading while keeping content fresh.
Static Site Generation (SSG)	Pages like About, Contact and Privacy are created in advance.	Instant loading and excellent SEO.
Code Splitting	Visitors only download the code needed for the current page.	Smaller downloads and faster navigation.
Lazy Loading	Images load only when visitors scroll to them.	Faster page loading and lower data usage.
Image Optimization	Images are automatically compressed and resized.	Better quality with much faster loading.
WebP / AVIF Images	Modern image formats that are much smaller than JPG or PNG.	Improves speed without reducing quality.
Font Optimization	Only the fonts your visitors actually need are loaded.	Faster text rendering.
Brotli / Gzip Compression	Website files are compressed before reaching visitors.	Smaller downloads and improved performance.
Minified Assets	Removes unnecessary code and spaces.	Smaller file sizes and faster loading.
Browser Caching	Visitors don't re-download the same files every visit.	Faster experience for returning users.
Server Caching	Frequently visited pages are stored for quick delivery.	Faster response and lower server load.
CDN (Content Delivery Network)	Copies of your website are stored around the world.	Visitors load your website from the nearest server.

FEATURE	WHAT IT IS	WHY IT MATTERS
HTTP/2 & HTTP/3	Modern communication protocols between browser and server.	Faster and more efficient loading.

Table B — SEO Features (Plan 2)

FEATURE	WHAT IT IS	WHY IT MATTERS
XML Sitemap	A roadmap of your website for Google.	Helps search engines discover all pages.
Robots.txt	Instructions telling search engines what they can crawl.	Better indexing control.
Meta Titles	The blue title shown in Google Search.	Improves rankings and click-through rate.
Meta Descriptions	The short summary below the title in Google Search.	Encourages more people to visit your website.
Clean URLs	Easy-to-read page addresses.	Better SEO and user experience.
Canonical URLs	Prevents duplicate content issues.	Protects search rankings.
Open Graph Tags	Controls how your website appears on social media.	Better appearance when shared.
Twitter Cards	Optimizes previews on X (Twitter).	Improved social sharing.
Structured Data (Schema)	Extra information added for Google.	Rich search results like ratings and FAQs.
Product Schema	Adds product information for Google Shopping.	Better visibility for eCommerce websites.
FAQ Schema	Displays FAQs directly in Google Search (when eligible).	Increases visibility and trust.
Breadcrumb Schema	Shows website navigation in search results.	Easier navigation and better SEO.
Internal Linking	Connects related pages together.	Helps Google understand your website.
Image ALT Text	Descriptions added to every image.	Better accessibility and image SEO.
Mobile SEO Optimization	Website is optimized for mobile devices.	Better Google rankings.
SEO Dashboard	Edit SEO settings without coding.	Easy SEO management anytime.

Table C — Security & Reliability (included in all plans)

FEATURE	WHAT IT IS	WHY IT MATTERS
SSL / HTTPS	Encrypts data between visitors and your website.	Keeps information secure.
Secure Authentication	Passwords are safely encrypted.	Prevents unauthorized access.
Role-Based Access	Different permissions for Admin, Staff and Customers.	Protects sensitive information.
Security Headers	Extra browser-level protection.	Reduces hacking risks.
Input Validation	Checks all user input before processing.	Prevents common attacks.
Rate Limiting	Limits repeated requests from the same source.	Blocks spam and brute-force attacks.
Bot Protection	Stops harmful bots while allowing search engines.	Better security and performance.
Secure File Uploads	Uploaded files are validated before storage.	Prevents malicious uploads.
Database Indexing	Organizes data for faster searching.	Faster website and product searches.
Query Optimization	Fetches only the required data.	Better speed and lower server load.
Automated Backups	Regular copies of your website are stored safely.	Easy recovery if something goes wrong.
Error Monitoring	Automatically detects website issues.	Faster bug fixing.
Uptime Monitoring	Continuously checks if the website is online.	Immediate alerts if downtime occurs.
Connection Pooling	Reuses database connections efficiently.	Better performance under heavy traffic.

Table D — SEO Management Dashboard (Plan 2)

FEATURE	WHAT YOU CAN DO	WHY IT MATTERS
SEO Title	Add a custom SEO title for every page, product, or category.	Improves how pages appear in Google Search.

FEATURE	WHAT YOU CAN DO	WHY IT MATTERS
Meta Description	Write a custom description for search results.	Encourages more visitors to click your website.
URL Slug	Create clean and readable URLs.	Better SEO and user-friendly links.
Focus Keyword	Define the primary keyword for each page.	Helps organize content around a clear topic.
Google Search Preview	Preview how the page may appear in Google Search.	Review SEO before publishing.
Open Graph Title	Set the title shown when the page is shared on social media.	Creates professional-looking shared links.
Open Graph Description	Customize the description shown on social platforms.	Improves social media presentation.
Open Graph Image	Choose the image displayed when sharing the page.	Makes links more attractive and engaging.
Index / Noindex	Decide whether search engines should index a page.	Gives control over what appears in search results.
Canonical URL	Specify the preferred version of a page.	Helps prevent duplicate content issues.
Basic Schema	Select the appropriate schema type (Page, Article, Product, FAQ, etc.).	Helps search engines better understand your content.
XML Sitemap	Automatically generate and update the website sitemap.	Makes it easier for search engines to discover pages.
Robots.txt	Automatically generate a standard robots.txt file.	Guides search engines while crawling the website.
SEO Status	Quickly see whether the essential SEO fields have been completed.	Makes it easy to identify pages that need attention.
Draft & Publish	Save SEO changes before publishing them live.	Prevents accidental updates.
Mobile-Friendly Dashboard	Manage SEO settings from desktop, tablet, or mobile devices.	Convenient management from anywhere.
Secure Access	Only authorized administrators can modify SEO settings.	Protects your website from unauthorized changes.

FEATURE	WHAT YOU CAN DO	WHY IT MATTERS
Help Tooltips	Every SEO field includes a simple explanation.	Makes the dashboard easy to use for non-technical users.

9. Acceptance

To proceed, please confirm your chosen plan by signing below or replying to contact@digihook.in. This proposal is valid for 7 days from the date above.
